

# Germany Basecamp

## Wolfsburg I accept

Pedagogy Team: [pedagogy@42wolfsburg.de](mailto:pedagogy@42wolfsburg.de)

*Summary: This is your first project. You will connect your coding environment, intra profile, Notion and Discord as well as agree to the "42 WOLFSBURG: PARTICIPATION RULES AND REGULATIONS". Don't forget to ask your peers if you get stuck. Have fun!*

# Chapter I

## Instructions

To carry out this project, and, consequently, agree with the content of the attached pdfs, just follow the instructions in this pdf. The steps contained in this PDF will be essential for you to deliver all basecamp projects and participate properly in the Piscine.

Start by reading the Rules & Regulations found in the attachments.

Now you need to access the Basecamp Discord Server

- Access the server via [this link](#)
- Type "access" in the authentication channel, then WobBot will help you get started!

Now it's time to read the manual!

- Head over to the [Notion Manual](#) and read the documentation
- Take [this quiz](#)
- Find the page on Notion that explains how to log into workspaces - if you're having trouble getting access to Notion, try asking your peers or the Wolf P.A.C.K.

After logging into your session at `workspaces.42wolfsburg.de`, open the terminal and type:

```
$> cd ~/.ssh/  
$> cat id_rsa.pub
```

If you don't have the file in this directory, run the following command to generate your ssh key:

```
$> ssh-keygen -f ~/.ssh/id_rsa
```

- Take the ssh key that was displayed and copy. You must put it in your intranet account.
- In your intranet profile, access [https://profile.intra.42.fr/gitlab\\_users](https://profile.intra.42.fr/gitlab_users).
- Paste the ssh key into the field and send.

You will now be able to clone git repositories from intra.

After reading the pdf (in the project attachments on the intra), follow the next steps to agree with them:

- Clone the project's git repository in your development area.
- Within the project directory, create a new directory called *accept*.
- Within that last directory, download the attached file called *accept.txt* using the tool *wget*. Don't worry too much about it for now.
- Add the keyword from the RTFM quiz to the *accept.txt* file
- Add the keyword from WobBot's scavenger hunt to the *accept.txt* file
- Finally, push to your repository and set your project as finished.

```
$> git clone <URL OF YOUR REPOSITORY> <FOLDER NAME>
$> cd <FOLDER NAME>
$> mkdir accept
$> cd accept
$> wget <ATTACHMENT URL "accept.txt">
```
