

# Piscine C First Project

I accept

Staff 42 [staff@42heilbronn.de](mailto:staff@42heilbronn.de)

*Summary: This is your first project. You will connect your coding environment to your intra profile and agree to the "42 HEILBRONN: PARTICIPATION RULES AND REGULATIONS". Don't forget to ask your friends if you get stuck. Have fun!*

# Chapter I

## Instructions

To carry out this project, and, consequently, agree with the content of the attached pdfs, just follow the instructions in that pdf. The steps contained in this PDF will be essential for you to deliver all basecamp projects.

After logging into your session at `workspaces.42heilbronn.de`, open the terminal and type:

```
$> cd ~/.ssh/  
$> cat id_rsa.pub
```

If you don't have the file in this directory, run the following command to generate your ssh key:

```
$> ssh-keygen -f ~/.ssh/id_rsa.pub
```

After that continue with the following instructions:

- Take the ssh key that was displayed and copy. You must put it in your intranet account.
- In your intranet profile, access [https://profile.intra.42.fr/gitlab\\_users/new](https://profile.intra.42.fr/gitlab_users/new).
- Paste the ssh key into the field and send.

You will now be able to clone git repositories for your web development area.

After reading the pdf (in the project attachments on the intra), follow the next steps to agree with them:

- Clone the project's git repository in your development area.
- Within the project directory, create a new directory called *accept*.
- Within that last directory, download the attached file called *accept.txt* using the tool *wget*. Don't worry too much about it for now.
- And then push to your repository and set your project as finished.

```
$> git clone <URL OF YOUR REPOSITORY> <FOLDER NAME>  
$> cd <FOLDER NAME>  
$> mkdir accept  
$> cd accept  
$> wget <ATTACHMENT URL "accept.txt">
```
