

Netwhat

System administration and network

Summary: This project is an introduction to network problematics

Contents

I	Introduction	2
II	Mandatory part	3
III	Turn-in and peer-evaluation	4

Chapter I

Introduction

`Netwhat` is a quiz. This project will evaluate your and help you build your network knowledge. You can now start reading network lessons on internet, and check your knowledge on online questionnaires.

Once done and when you are ready to pass our questionnaire, you will be able to go to: `netwhat.42.fr`.

Chapter II

Mandatory part

- Go to the website: `netwhat.42.fr`. This site will provide access to the network questions.
- Log on to the site by clicking on the "login" button. You will be authenticated by the intranet of 42.
- Once connected, you will have access to the quiz interface. You can only pass it once, and you will have to retry the project to be able to retry the questionnaire.
- At the end your mark will be given and an encrypted key will be generated. This key will be used during your evaluation.
- If you fail the quiz and want to retry the project, an **retry** button will appear below your result. This button will only work after retrying the project

Chapter III

Turn-in and peer-evaluation

To submit your work, paste the key in a file in the git repo given when subscribing to the project. Your evaluator will use that key to verify your answers during defence.
