

Basecamp C

Intro Git

Staff 19 basecamp@s19.be

Summary: First contact with Git

Chapter I

Instructions

To succeed this project, you will have to follow the instructions in this pdf.

We ask you and your village, to each clone the repository from your project's page and create a simple file following this pattern `login.txt` containing your login and a new line.

```
$> git clone <URL OF YOUR REPOSITORY> <FOLDER NAME>
$> cd <FOLDER NAME>
$> echo "<LOGIN>" > "<LOGIN>".txt
```

Don't hesitate to find another way to achieve this exercise. The more you practice with git, the easier it'll get. For example, you can use the web interface `basecamp.s19.be` instead of creating the file from the command line.

The next requirement is that each camper of the village has to create his file (respecting previous instructions) within the repository, and add it himself to the Git using `git commit`.

If your village (name = Bocal) is composed of Zen, Volt, Vixy, Mushu, EVE, Appa and Archimede, it should look like that:

```
$> ls Bocal
zen.txt volt.txt vixy.txt mushu.txt eve.txt appa.txt archimede.txt
```

Every camper of the village must create their OWN commit named with his/her own <LOGIN>. If you forgot how to create a commit, check the previous PDF (I-Accept).
