Basecamp

I accept

Staff 19 basecamp@s19.be

Summary: *Your very first project*

Chapter I

Instructions

   To carry out this project, and, consequently, agree with the
content of the attached pdf, just follow the instructions in this pdf.
The steps contained in this PDF will be essential for you to
deliver all your basecamp projects.

   After logging into your session at `basecamp.s19.be`, open the terminal and type:

```
$> cd ~/.ssh/
$> cat id_rsa.pub
```

- Take the ssh key that was displayed and copy. You must put it in your intranet account.

- In your intranet profile, access `https://profile.intra.42.fr/gitlab_users/new`.

- Paste the ssh key into the field and send.

You will now be able to clone git repositories for your web development area.

   After reading the pdf (in the project attachments on the intra),
   follow the next steps to agree with them:

- Clone the project's git repository in your development area.

- Within the project directory, create a new directory called *accept*.

- Within that last directory, download the attached file called *accept.txt* using the tool *wget*. Don't worry too much about it for now.

- And then push to your repository and set your project as finished.

```
$> git clone <URL OF YOUR REPOSITORY> <FOLDER NAME>
$> cd <FOLDER NAME>
$> mkdir accept
$> cd accept
$> wget <ATTACHMENT URL "accept.txt">
$> cd ..
$> git add accept/accept.txt
$> git commit -m "My great message"
$> git push
```
